ROLLEPRO

RollePro's ergonomic design and specially-formulated, heat-resistant wheel brings speed and comfort to a once time-consuming application.

- Three simple steps to conforming vinyl to rivets, contours and irregular surfaces in seconds.

1. Leave an open, un-squeegeed air channel over a row of rivets or around any contoured surface.
2. Heat the loose vinyl over that area to 180-200° F
3. Use the RollePro to roll down the vinyl in one smooth motion
